

AirHelp – modern startup, modern solutions

AirHelp

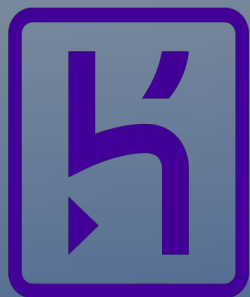

We help you get

compensation

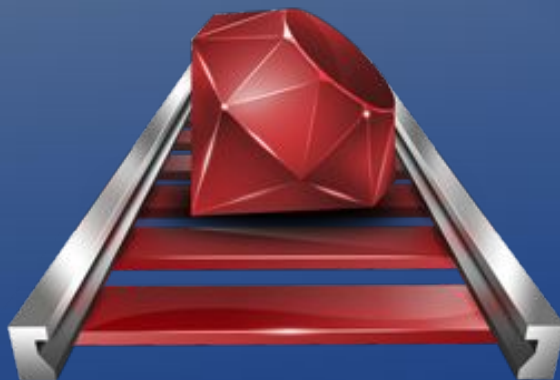

from airlines for

delayed, cancelled and overbooked
flights

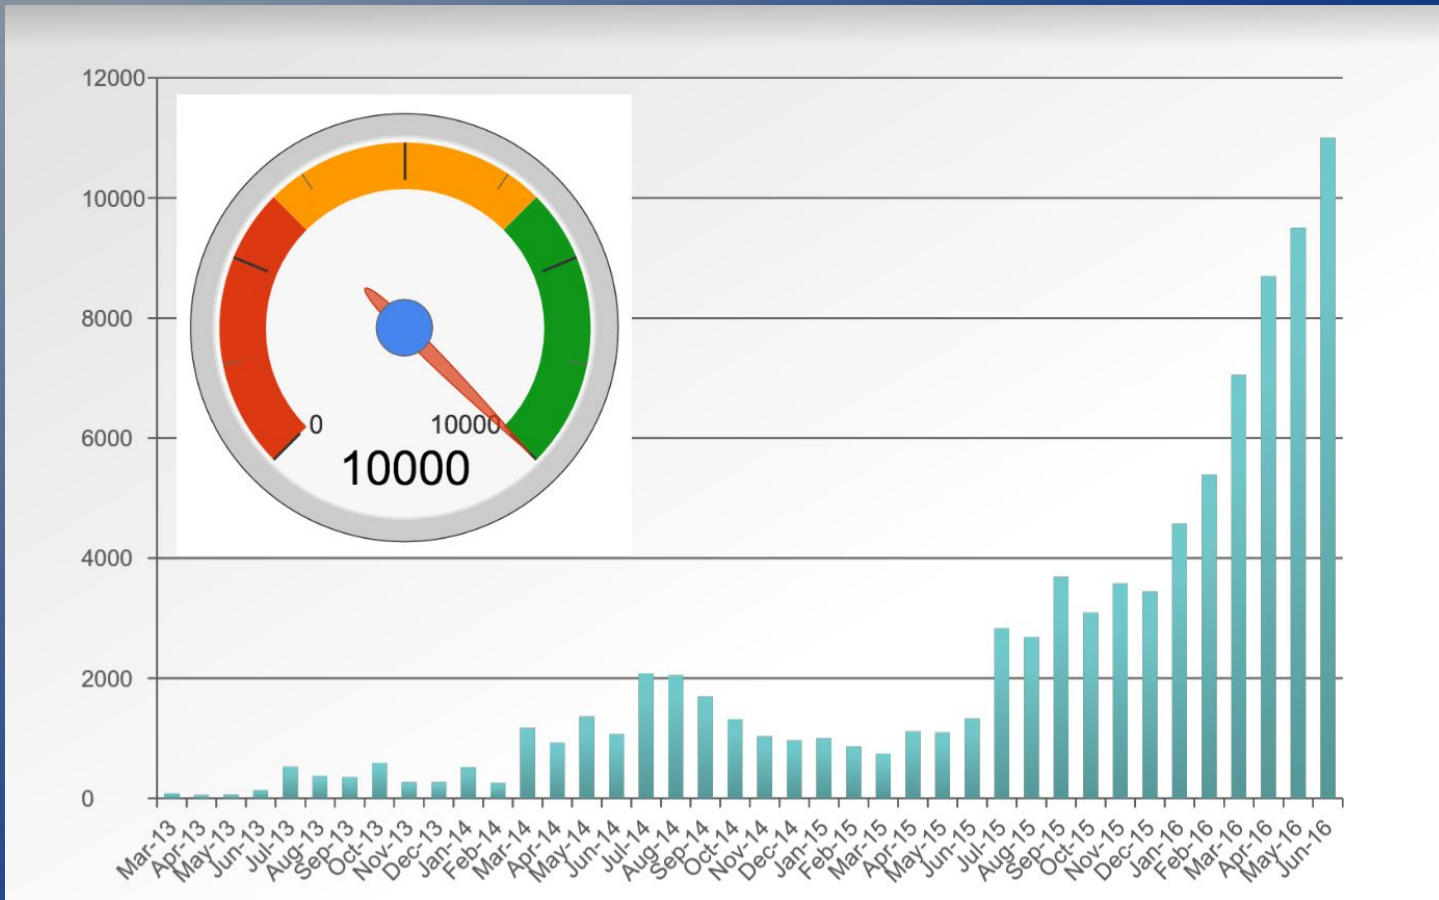

In the beginning...

HEROKU

... but then the traffic began ...

.. and the stack evaluated ...

... but hey, many microservices in heroku ?...

... Amazon to the rescue ...

... more than 200 servers, many different technologies ...

Every developer becomes a DevOps?

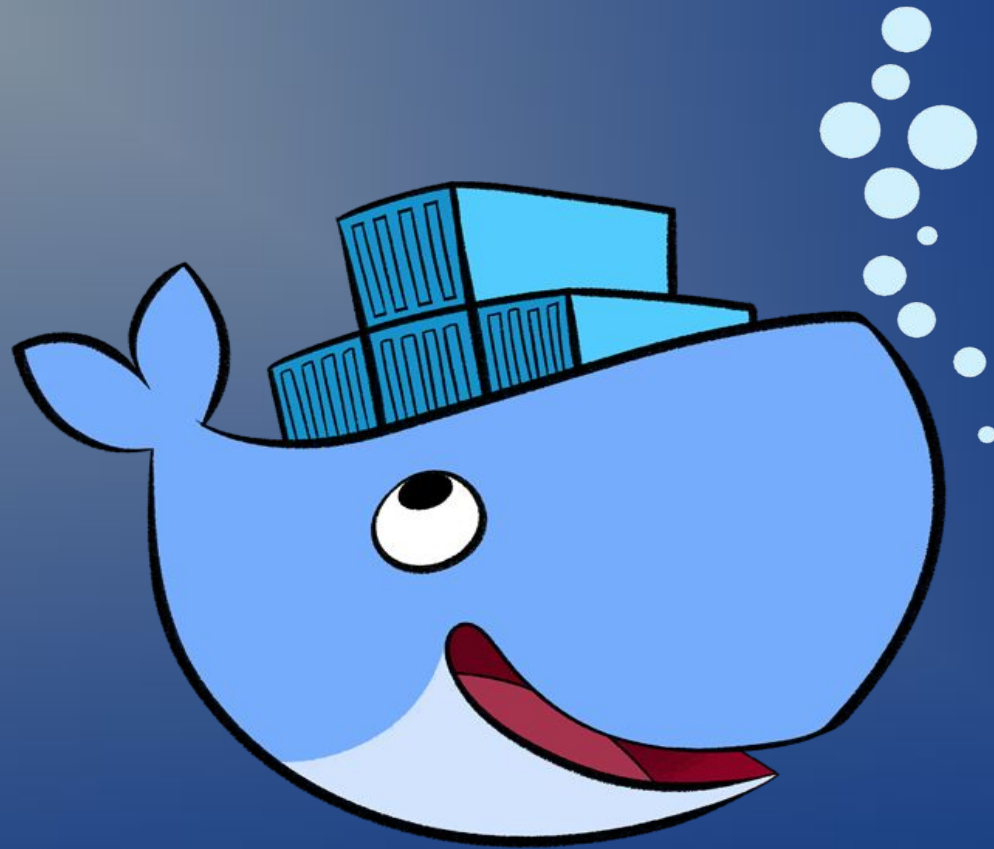

Once upon a time...

...and found a friend ...

... works on my machine, here is my
machine ...

... but how to rule them all? ...

... and not to fail? ...

... captain Kubernetes to the rescue ...

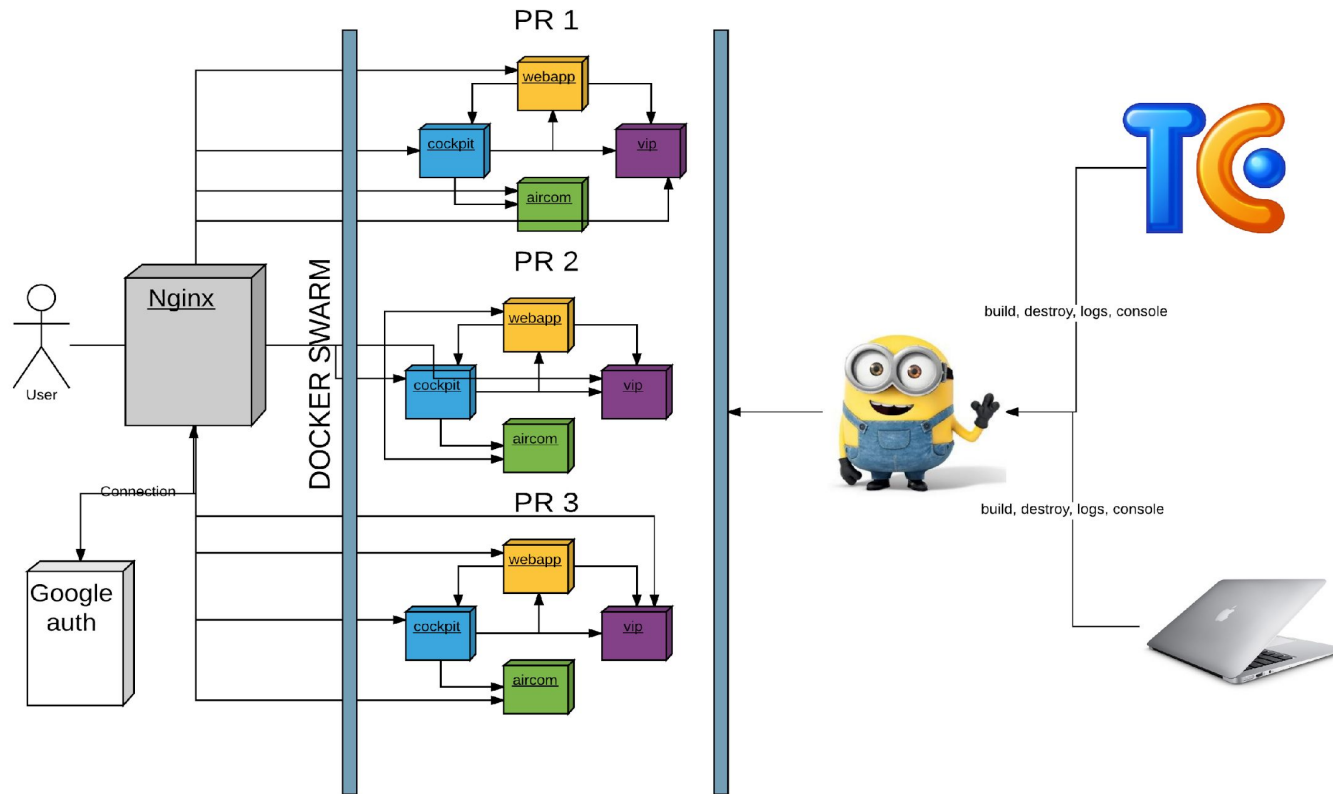

... scale, create, restart automatically ..

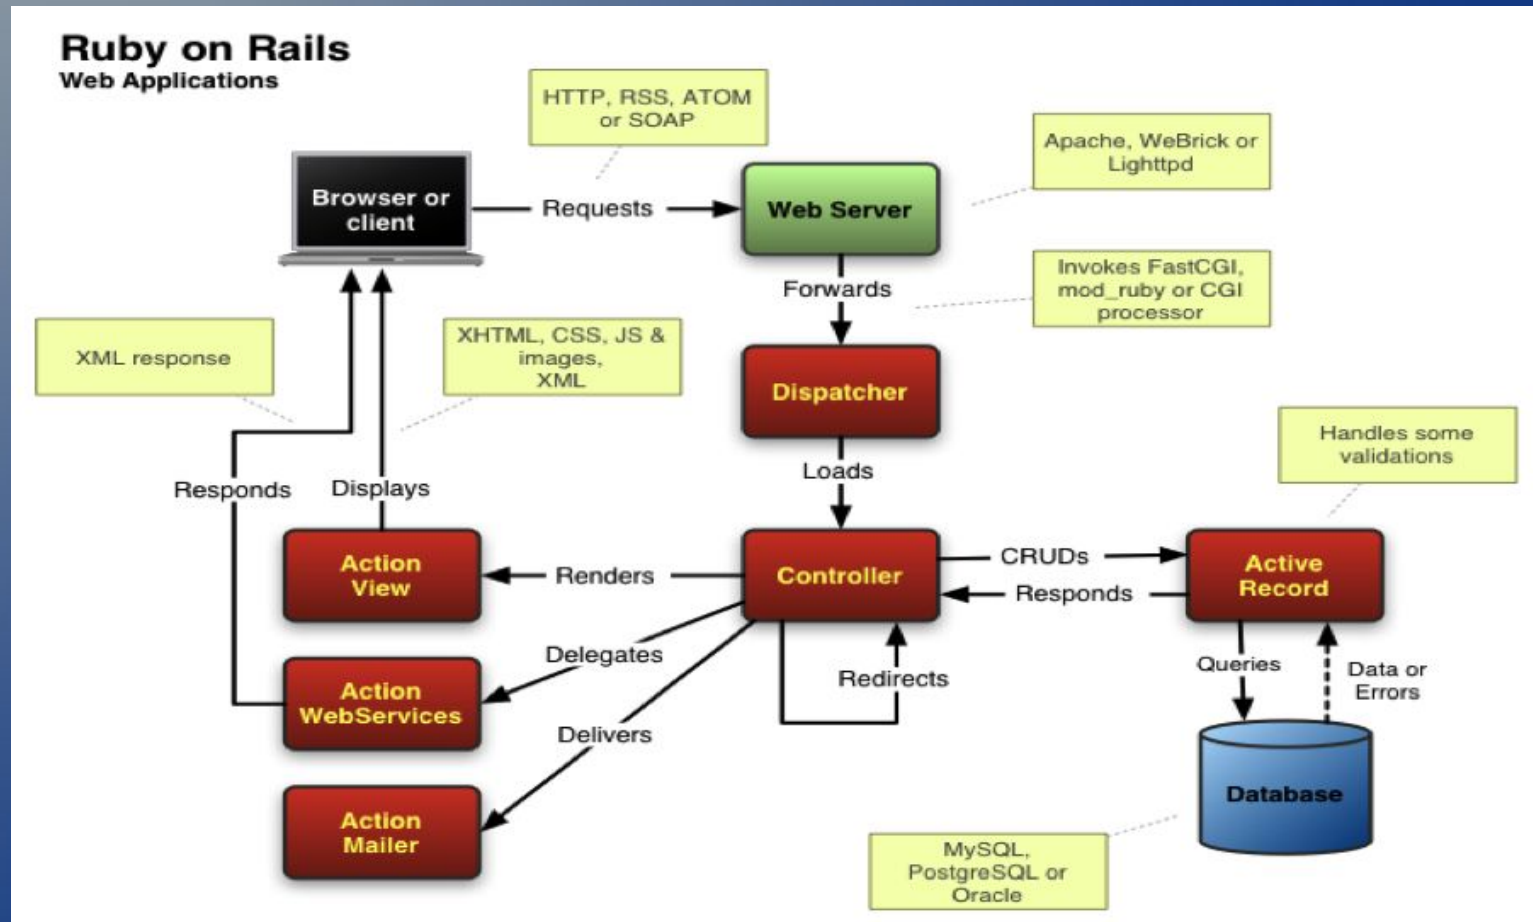

... but if we still miss heroku in development ...

...we have environment per PR ...

... but when application server is an overkill ...

... for single endpoint ...

... deploy just the code ...

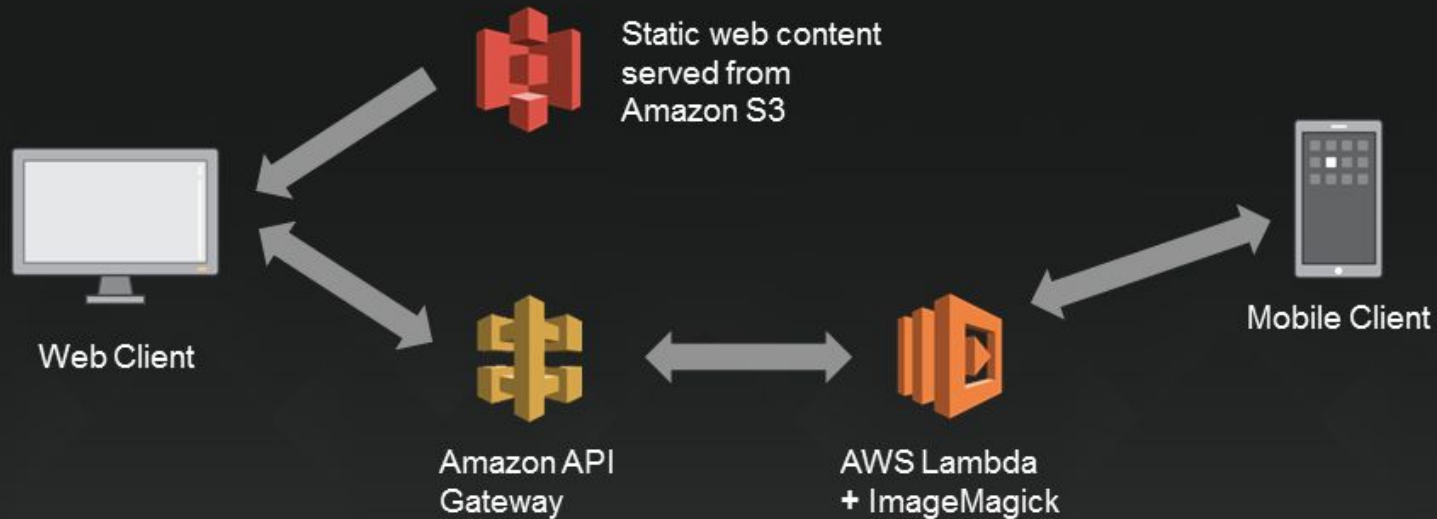

```
1 console.log('Loading function');
2
3 exports.handler = function(event, context) {
4     //console.log('Received event:', JSON.stringify(event, null, 2));
5     console.log('value1 =', event.key1);
6     console.log('value2 =', event.key2);
7     console.log('value3 =', event.key3);
8     context.succeed(event.key1); // Echo back the first key value
9     // context.fail('Something went wrong');
10 };
```

... to serverless architecture ...

Serverless Microservice Architecture

Airhelp – broaden your horizons
